

Contribution Instructions

Do I have the right time for the token sale?

Our general token sale starts on **September 21th, 2017 at 2pm UTC**.

Make sure to convert your timezone so you have the correct time for the token sale.

Do I know how to participate?

To fully participate, you need to have done the following:

1. Bought Ether in an exchange
2. Transferred your Ether to an ERC20 compatible wallet (see below)
3. Sent a deposit to a token sale address with our provided data and gas limit values

The only way to successfully participate is by following these steps. If for some reason your transaction isn't going through when you try to send to our address, double check that your gas and data values are correct.

The screenshot shows the 'Send Ether & Tokens' interface. At the top, there is a navigation bar with links: 'New Wallet', 'Send Ether & Tokens' (highlighted), 'Swap', 'Send Offline', 'Contracts', 'ENS', 'Check TX Status', and a dropdown arrow. Below the navigation bar, the title 'Send Ether & Tokens' is displayed. The main form contains the following elements:

- To Address:** A text input field containing the address '0x08a4d2372777267373Ff0FBF80FA278b2846c087'. A red arrow labeled '1' points to this field.
- Amount to Send:** A section with a red box around the input field containing 'Amount (min 0.1 ETH)'. A red arrow labeled '2' points to this section. To the right of the input field is a dropdown menu showing 'ETH'. Below the input field is a link that says 'Send Entire Balance'.
- Gas Limit:** A section with a question mark icon and the text 'Gas Limit'. Below it is an input field containing '21000'.
- +Advanced: Add Data:** A link located below the Gas Limit field.
- Generate Transaction:** A large dark blue button at the bottom of the form. A red arrow labeled '3' points to this button.

In your transaction, make sure the “To Address” is the address we have listed on our contribution page. The amount to send is the desired amount of ETH you wish to use in the token sale. The Gas Limit is the limit we’ve provided on the token sale page. Remember to Add Data as well—as we’ve provided that for you to include in the transaction.

Do I have an ERC20 compatible wallet?

As we’ve mentioned previously, the ERC20 standard has not only allowed for wallet standardization where developers are able to streamline a solution to hold the various tokens being created, but it also defines a set of functions within the Ethereum network. By adopting the ERC20 standard in our token sale event, we’re ensuring our processes within the Ethereum network are as smooth as possible, and allowing our community to effortlessly store these tokens. Some compatible wallets for this event include Mist, MetaMask, MyEtherWallet, and Parity.

*Note: **incompatible** wallets include any exchanges such as Coinbase, Poloniex, Kraken, Bitstamp, Bitfinex, Gatehub, Bitrexx and more. Exodus and Jaxx aren’t compatible either. Those who transfer funds on these sites will not receive the currency after the contribution.*

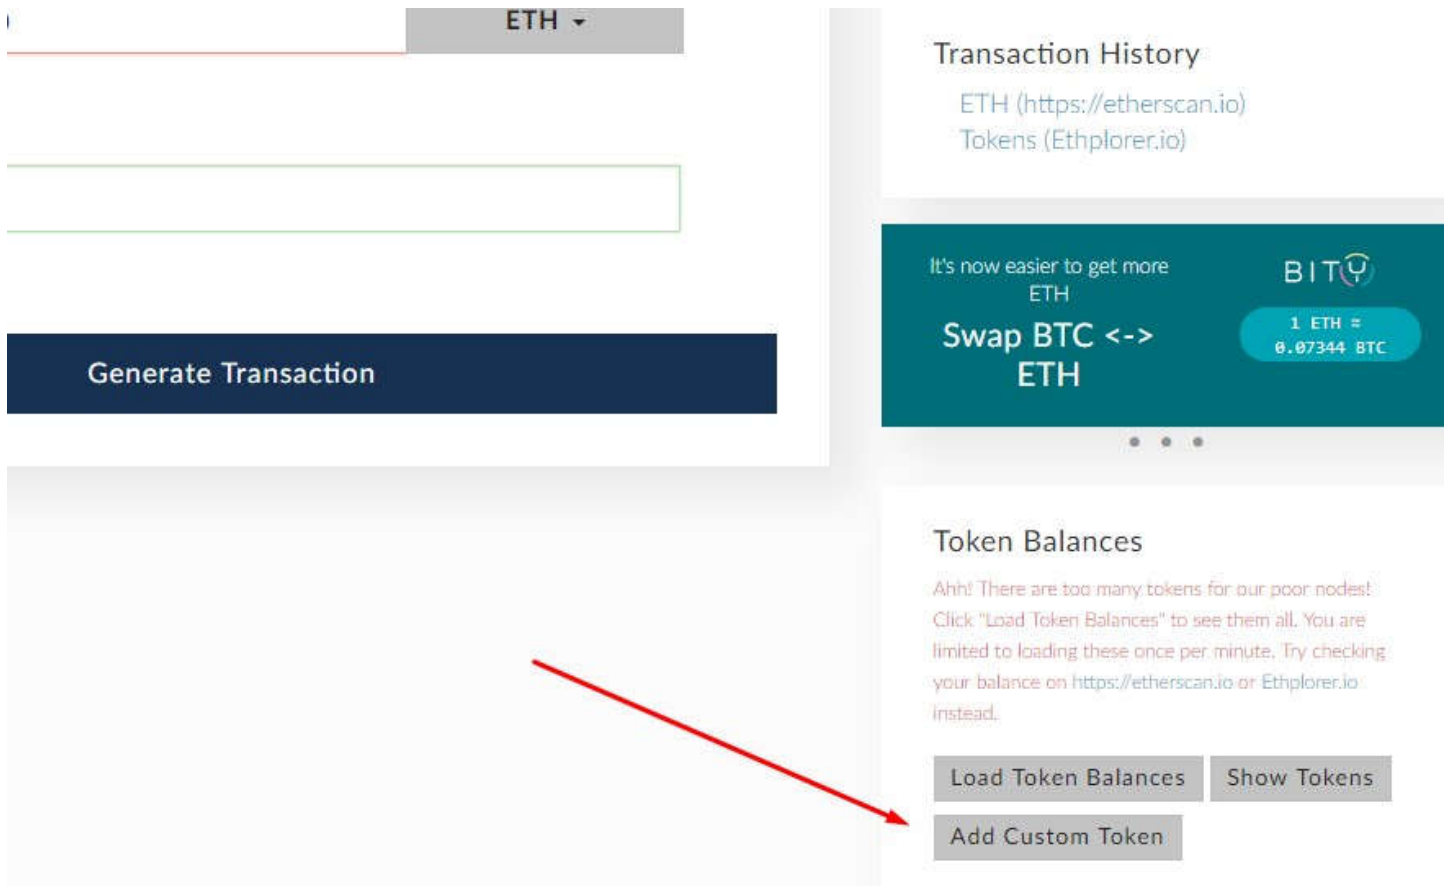

But how do I send funds using my ERC20 compatible wallet to participate?

Do have one of the mentioned wallets but you’re still not sure how to send funds to participate in the token sale? Check out the following guides for each wallet:

- [MyEtherWallet](#)—Official
- [MetaMask](#)—Official
- [Parity](#)—Unofficial, recommended by the Parity team
- [Mist](#)—Unofficial

How to add a token after purchase?

1. Open in the wallet section “Add Custom Token”

2. Insert GMT Token data

A screenshot of the 'Add Custom Token' form. It features three input fields: 'Address' containing '0x08a4d2372777267373Ff0FBF86', 'Token Symbol' containing 'GMT', and 'Decimals' containing '18'. Above the form are buttons for 'Load Token Balances', 'Show Tokens', and 'Add Custom Token'. Below the form is a blue 'Save' button. A small globe icon is located to the right of the 'Address' field.
